

REAL-TIME COMPLIANCE IN THE PALM OF YOUR HAND

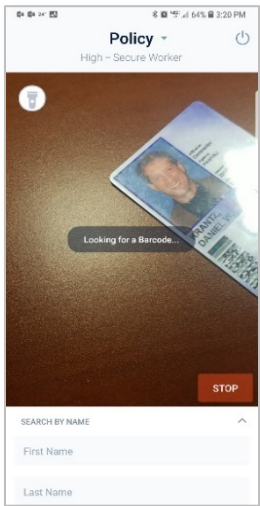

Verifying workers' compliance with security and safety best practices is critical for operational integrity. SWAC's Mobile Authentication Tool ('MAT') provides risk and security managers with real-time personnel integrity monitoring.

Configured uniquely for each access point, MAT enables secure check-in, and optional check-out, using virtually any Windows, Android, or Apple device. And real-time reporting eliminates paper records and assures that all access exceptions are captured and proactively sent to authorized representatives for management review.
